2013

The Texas Criminal Justice Coalition (TCJC) works with peers, policy-makers, practitioners, and community members to identify and promote smart justice policies that safely reduce the state’s costly over-reliance on incarceration – creating stronger families, less taxpayer waste, and safer communities.
GRAFFITI OFFENSES AND RESPONSES

Over recent years, Texas cities have increased their efforts to address and prevent graffiti. Some cities have implemented abatement programs, aimed at educating communities about graffiti, while simultaneously engaging in expensive cleanup efforts. Others have ramped up arrests for graffiti, which can now lead to prison terms.

Although comprehensive statistics can be difficult to obtain on this issue, Texas cities are seemingly seeing no decrease in graffiti, despite the efforts described above. And the costs – both of cleanup and incarceration – pose a significant drain on already strained local budgets. Likewise, property owners can pay thousands of dollars to remove graffiti from their property.

Communities are struggling to find solutions. However, further criminalizing graffiti adds other costs without providing any true relief. Enforcement and incarceration come with a high price-tag in the immediate term, but long-term costs also result from criminalizing individuals, many of them youth, for graffiti offenses. A criminal conviction poses lifelong barriers, including limited employment and housing opportunities. Fewer contributions to the local tax base end up burdening communities, while a lack of opportunities drives people to further criminal behavior.

Some effective models are available to prevent graffiti. Studies recommend a “rapid response” approach: eradicating graffiti within 48 hours. This has proven most successful in preventing recurring instances of graffiti. Another method promotes community involvement, encouraging graffiti artists to turn their artistic talents into mural paintings. In Philadelphia, this has resulted in the city becoming famous for the quality of its murals and the cohesiveness of its neighborhoods.

Considering the economic and personal costs of criminalizing certain behavior, Texas must begin identifying and implementing approaches other than incarceration to address and prevent graffiti.
Graffiti is defined as any marking, etching, or painting that defaces public or private property without the owner’s permission. Despite the belief that graffiti is typically associated with gangs, it is found in all locales and jurisdictions, and in fact only a small portion of all graffiti is done by gang members. As noted in the table below, most graffiti is caused by the common “tagger,” someone who marks easily accessible locations, sometimes repeatedly, feeling little connection to place or neighborhood. Other graffiti can be done for artistic purposes – and given the beauty and originality of an occasional graffiti piece, many people may see it as the artistic expression of a misunderstood and marginalized population, and thus legitimate art. But much of graffiti is simple and ugly, and it can consist of racist diatribes or offensive language directed at different religious faiths.

As this table shows, the drive to create graffiti varies among individuals who participate in it. It may be a rite of passage. It may be an exuberant “thumbing of the nose” towards authority common to many youth, or it may be prompted by anger and hostility toward society, thus fulfilling some psychological need. The great majority of graffiti (“tagging”) may be prompted by the thrill of the act, and by the ensuing notoriety.
Community and Individual Repercussions of Graffiti

Community Harm

Regardless of the features or motive behind graffiti, it is considered a crime, and it costs some Texas cities millions of dollars in cleanup costs each year. According to the “broken windows” theory, unchecked graffiti may also cause other crimes: By ignoring low-level vandalism or community decay, more dangerous crime and deeper, more intractable community problems may result. While a single incident of graffiti may not seem important or offensive, graffiti in one area almost invariably attracts more.

Individual Consequences

The laws addressing graffiti in Texas are scattered throughout different codes. The Penal Code defines the offense and mandates levels of punishment for adults, which can range from Class B misdemeanors to first degree felonies; the Family Code sets out punishments for youth; and the Local Government Code describes the responsibility of removing graffiti.

From 2009 through 2011, Texas sentenced 22 adults to state jail for graffiti, whose cumulative length totaled 9,475 days. At an estimated cost per day of $43.03, the cost to Texas taxpayers for incarcerating these individuals amounted to nearly $420,000. This figure does not include costs of investigation, arrest, detention, or trial.

In Travis County alone, 72 adults were arrested and charged with felony-level graffiti-related crimes between January 2010 and December 2011; 20 of these individuals were sentenced to terms of at least 20 days in county jail, which carries an average statewide per-day cost of $59 per person.
Recommendations

Because of graffiti’s prevalence and the costs associated with cleanup, the focus of some Texas lawmakers has been to push for increasingly punitive laws against graffiti. However, targeted diversion strategies, rapid removal plans, and the use of products that minimize graffiti are more effective at reducing unwanted graffiti in the community.

1. Other than graffiti offenses committed as part of gang activity or in conjunction with burglary or criminal trespass, graffiti should be designated as a misdemeanor offense, and all efforts should be made to redirect graffitists into community supervision and community-sponsored arts programs.

Communities should retain the right to prosecute individuals who commit multiple or gang-related offenses. However, the costs of prosecution, detention, and incarceration for simple graffiti could be better used to fund arts programs for convicted graffitists that will redirect them towards more positive behavior. Philadelphia has pioneered the diversion of adjudicated graffitists into mural making, allowing them to express their artistic impulses and be recognized as legitimate artists. Beginning in 1984, the city began offering youth charged with graffiti a chance to conceive of and assist in painting murals that celebrated their neighborhood’s history. The resulting murals created a large economic boost to Philadelphia, and the beauty and variety of the murals were recognized in a report as crucial to the development of vibrant commercial corridors in Philadelphia. The report recommended more efforts like the Mural Arts Program (much of which is funded through private investments), calling such programs “effective and cost-efficient ways of replacing eyesores with symbols of care.”

Texas should take a similar approach, where possible, even if it does not involve mural making specifically. This is especially critical for youth who commit graffiti. Studies have repeatedly pointed to the positive outcomes of involving at-risk youth in arts programs. In fact, one report spoke of art as “an unparalleled means for young people to develop the strength, resiliency, and self-image that allow them to participate in society on healthy terms.”

2. Cities should implement a “rapid response” model, which focuses on the prompt eradication of graffiti to remove the perception of blight and decay. Additionally, cities’ “rapid response” teams should be comprised of convicted graffitists, as part of their community service.

As discussed above, the “broken windows” theory finds that graffiti, similar to broken windows and abandoned buildings, creates the perception of blight and decaying neighborhoods. This necessitates the rapid removal of graffiti, which in turn can reduce the opportunity for the graffitist to gain satisfaction from his or her act, and thus cause him or her to lose interest in re-committing graffiti offenses.

A rapid removal approach involves two crucial components: (1) a community-wide campaign, where citizens detect and report graffiti as soon as it occurs, and (2) the ability of the community to respond to the graffiti within 24 to 48 hours, to remove it as quickly as possible. Both Corpus Christi and Houston, through East End District Management – which has formed collaborations with 18 other Houston neighborhoods – have claimed success with programs that respond within 48 hours to reports of new graffiti. These efforts include neighborhood education, hotlines, and referrals of probationers as clean-up crews from local probation departments.
Other Texas cities that have the means to implement a community-wide response to graffiti should undertake similar efforts to quickly eradicate it, utilizing individuals on court-ordered community supervision to form teams for graffiti removal.

3. Cities should seek creative methods of discouraging graffiti by investing in products that diminish or eliminate opportunities for graffiti on public buildings, and by encouraging property owners to do the same.

Paint-like products such as polyurethane-based coatings are resistant to graffiti and easy to clean. Property owners can use these on steel, concrete, or brickwork to prevent damage from graffiti. Likewise, sealers on concrete prevent absorption of paint. And wash-off coatings, known as sacrificial coatings, are wax or silicon applications on walls or buildings; when hot water is applied, these coatings break down, allowing graffiti to be washed off.

Other means for reducing graffiti include using textured surfaces on outer walls to obscure graffiti legibility. Typically, grooved and rough surfaces are unattractive to graffiti artists.

While these approaches may be expensive and require replacement, they are cheaper than repeatedly recovering or repainting over graffiti, and less destructive in human costs than incarceration for simple graffiti acts.

Conclusion

Graffiti poses difficult logistical and financial problems for affected communities. Repeated instances of graffiti discourage property owners, limit economic investment in affected areas, and drain city budgets of funds that could be better spent on education and community development. But imposing increasingly severe criminal penalties on graffiti artists have little to no deterrent value, while only adding costs to local and state budgets. Criminal penalties also burden individuals with the collateral consequences of felony convictions, deferring costs to communities struggling to address the needs of individuals who cannot access employment or housing due to their criminal records. Efforts aimed at eradicating graffiti should revolve around diversion of graffiti artists into positive, artistic endeavors that include communities, while reserving the prosecution of graffiti artists only for those who are involved in other, more serious crimes.
